

Water Leak Checklist

Call Us 800.889.9242

01

STOP the water

You will have a water shut off valve – usually located at the front of the house. Shut off main water valve immediately.

02

Call a plumber

Document the damage by taking several photos. Then have a plumber come out and fix the issue. The key is to get up and running as soon as possible. The initial repair of the plumbing is generally not covered by insurance.

Call us immediately 800.889.9242, we have excellent plumbers whose numbers we can pass on - they will treat you fairly and do an excellent job. They have very good reviews from the people we have referred them to.

03

Dry the Area ASAP

Drying the areas affected is key to keeping problems to a minimum.

Depending on the size of the water spill, it may be as simple as using mops and towels to dry up the floor - to cutting out some drywall, drying or pulling up some areas of carpet. Other times you might need to replace vinyl or wood tile.

TIP: Using a wet dry vacuum can be very helpful.

04

Assess the damage

We have excellent resources to refer for drywall repair - call us for these contact phone numbers. **Cutting out the wet drywall as soon as possible can save you a lot of grief.**

05
